

Enhancements in Aras Innovator 12.0 SP11

Improvements to Item's Workflow List Dialog

- When an item goes through more than one workflow, a workflow list dialog is presented to allow a user to select a specific workflow for more details. This dialog has been improved by adding date/time properties as well as the user identity which initiated the workflow. This allows a user to more easily differentiate between the workflows.

Maximize Life Cycle and Workflow windows

- A maximize button is now available on Life Cycle and Workflow modal windows, to see the content in a larger area.

Improved PolyItem create dialog

- The PolyItem create dialog has been improved both in terms of usability and styling. Only the poly sources for which the user has Can Add permission are now displayed, and if only one poly source is permitted for a given user, the item is created immediately.

Pop-up dialogs updated for consistent usability

- Many common dialogs are updated for consistent usability and styling, including "About", "Activate Feature", "Service not available", "Activation Error", "Activation Successful", "Import Feature License", "Prompt", "Purge", "Delete", "Search mode Warning", "Unsaved Changes", "Change Password", "Change E-Signature" and "Error" dialogs.

Default authentication method

- Plugin for Default authentication method has been created. Now Administrator is able to configure default authentication method and database. After this User will be redirected to predefined (default) authentication method and database even on first login skipping Innovator login screen in case of external authentication.

Dynamic Viewer improvements

- The Dynamic Viewer - used for 3D Visualization - has been improved for initial load and refresh for displaying 3D content.

1.1.1 Issues Fixed in Aras Innovator 12.0 SP11

Issue #	Description
F-000424	Many common dialogs are updated for consistent usability and styling, including "About", "Activate Feature", "Service not available", "Activation Error", "Activation Successful", "Import Feature License", "Prompt", "Purge", "Delete", "Search mode Warning", "Unsaved Changes", "Change Password", "Change E-Signature" and "Error" dialogs.
F-002500	Editing change made to properties of an item in a relationship grid are automatically synchronized with properties in form fields, if that same item is currently open in a main tab.
F-002940	Query Builder has been improved for cases where aggregate functions are used in conditions.
F-002998, F-003005, F-003063	The Dynamic Viewer - used for 3D Visualization - has been improved for initial load and refresh for displaying 3D content.
F-003075	A Maximize button is now available on Life Cycle and Workflow modal windows, to see the content in a larger area.
F-003076	The PolyItem create dialog has been improved both in terms of usability and styling. Only the poly sources for which the user has Can Add permission are now displayed, and if only one poly source is permitted for a given user, the item is created immediately.
F-003138	When an item goes through multiple workflows, a workflow list dialog is presented to allow a user to select a specific workflow for more details. This dialog has been improved by adding date/time properties as well as the user identity which initiated the workflow.
I-022361, 086815	The Technical Document Editor will now render external/referenced content after it has been converted.
I-022730	Corrected an issue in which, if the 'Zoom Window' was applied in the PDF Viewer and 'Measure' was applied with recorded measurement, the discussion panel would save the measurement values, but the measurement point labels would not be displayed in the snapshot.
I-022731	Corrected an issue in which, if 'Zoom' was applied in PDF Viewer and 'Measure' was applied with recorded measurement, the discussion panel would save the measurement values, but the measurement point labels would be shifted in the snapshot.
