Enhancements in Aras Innovator 12.0 SP14

Enterprise Search - Separate Install

- Prior to version Aras Innovator 12.0 SP14, portions of Enterprise Search were installed along with Aras Innovator. Starting with this version, Enterprise Search will be installed separately.

- Enterprise Search will be disabled in Aras Innovator 12.0 SP14 until the new Enterprise Search installation or upgrade is run.

Enhanced Text Search Feature with the ability to replace text

- The Technical Document Editor now has the ability to replace selected text for the contents of an entire document. This augments the current Text Search capability.

Enhanced usability in the Technical Document Editor

- The default Technical Document schema has enhanced editing logic that provides authoring features more like typical word processing applications. For example, selecting the Enter key will automatically add new list items for lists and text elements. In addition, administrators will be able to configure the logic associated with Enter, Backspace, and Delete key events to streamline the document editing function.

Improved Date Picker

- The new date picker dialog has improved usability and styling and allows easy entry of range searching options in simple search.

Reusable Commands

- New "Commands" capability within Configurable User Interface (CUI) provides the ability to easily reuse command bar functions in different locations in the user interface.

1.1.1 Issues Fixed in Aras Innovator 12.0 SP14

Table 1:   Framework

Issue #	Description
F-000163	New "Commands" capability within Configurable User Interface (CUI) provides the ability to easily reuse command bar functions in different locations in the user interface.
F-001534	Provided the ability to search a given string in the Technical Document Editor and replace the matches found in editable content with a separate specified string value.
F-001539	Provided Key Event handling for Enter, Backspace, and Delete Keys to provide default implementation for advanced editing of content in documents within the Technical Document Editor.

Issue #	Description
F-003000	Provided the underlying infrastructure to enable usability and content editing optimization for documents within the Technical Document Editor. This capability will allow customers to configure how the editor handles Key events for e.g. Enter, Backspace, and Delete, and Mouse click events.
F-003193	Added support for the following CAD versions: NX 1926, Inventor 2021, CATIA R2020, REVIT2020
F-003485	New date picker dialog has improved usability and styling, and allows easy entry of range searching options in simple search.
I-018696	Favorite searches created from the main search grid are now available from the modal search dialog.
I-023911, 086114	Fixed an issue in which the user would be unable to select actions for an ECO with unsaved changes because the action menu was blocked by a persistent pop-up.
I-024041	Fixed an issue that the page was not fully loaded during new Method creation.
I-025045	Provided usability improvements with ability to resize fields in Technical Document Item forms. Document Type Item - Content field, Document Style Item - Style field, Xml Schema Element Item - Editor Parameters & Generator Parameters fields.
I-025245, 088053	Fixed an issue in which favoriting an item failed for non-administrator users.
I-025591, 084416	Corrected an issue in which, after using the "Remove Additional Row Header" option and saving, the additional header would reappear.
I-026624, 089107	Corrected an issue that would cause setViewMode/setEditMode to run more than once which would display an error after clicking the "Edit" button in cases like the Root Work Breakdown Structure if there was only the root WBS element within the Program Management application. The setViewMode/setEditMode method will no longer be triggered a second time when an Item Form is already in view/edit mode.

Table 2: Container Deployment

Issue #	Description
I-022179	Fixed an issue which could cause AKS node overscaling during AICD deployment.
I-023235	Fixed an issue preventing a user from exporting Items of a custom ItemType to PDF format in AICD.
I-023980	Fixed an issue producing a confusing error message during execution of SQLMigration script to produce the bacpac file.
I-025285	Fixed an issue leading to a potential AICD cluster install error due to external IP address not being determined.
I-026309	Fixed an issue preventing AICD from downloading large files on AICD.
I-026564	Fixed an issue producing a confusing error message when installing Component Engineering in AICD.
