Send Us Your Comments

Aras Corporation welcomes your comments and suggestions on the quality and usefulness of this document. Your input is an important part of the information used for future revisions.

- Did you find any errors?
- Is the information clearly presented?
- Do you need more information? If so, where and what level of detail?
- Are the examples correct? Do you need more examples?
- What features did you like most?

If you find any errors or have any other suggestions for improvement, indicate the document title, and the chapter, section, and page number (if available).

You can send comments to us in the following ways:

Email:

Attention: Aras Technical Documentation

If you would like a reply, provide your name, email address, address, and telephone number.

If you have usage issues with the software, visit <https://www.aras.com/support/>

Document Conventions

The following table highlights the document conventions used in the document:

| Convention | Description |
|--------------------------------|--|
| Bold | Emphasizes the names of menu items, dialog boxes, dialog box elements, and commands. Example: Click OK . |
| Code | Code examples appear in <code>courier</code> font. It may represent text you type or data you read. |
| Yellow highlight | Code highlighted in yellow draws attention to the code that is being indicated in the content. |
| Yellow highlight with red text | Red text highlighted in yellow indicates the code parameter that needs to be changed or replaced. |
| <i>Italics</i> | Reference to other documents. |
| Note: | Notes contain additional useful information. |
| Warning | Warnings contain important information. Pay special attention to information highlighted this way. |
| Successive menu choices | Successive menu choices may appear with a greater than sign (-->) between the items that you select consecutively. Example: Navigate to File --> Save --> OK . |

1 Upgrading from Previous Releases

Aras provides tools and services related to upgrading to the latest software release. These tools and services are provided to customers as a benefit of the Subscription. Customers should use the guidelines below to determine the path to upgrading to the latest release.

1.1 Upgrading to Aras Innovator 23

Customers may request upgrade services from Aras Support if they meet 3 criteria.

1. Customers must have an active Subscription for Upgrade Services
2. Customers must be in production with Aras Innovator
3. Customers must be running on a version of Aras Innovator released no more than 30 months ago

If these 3 criteria are met, the Subscriber may email support@aras.com to initiate an upgrade services project.

Note: Customers with an active Subscription running a version of Aras Innovator released more than 30 months ago should still contact Aras Support at support@aras.com to discuss the available options.

2 Key Enhancements

The Aras Innovator 23 Key Enhancements are outlined below:

2.1 Technical Documentation Framework Client API

A comprehensive Application Programming Interface (API) that provides functions to customize the Technical Document Editor using the Configurable User Interface (CUI) is now available.

3 Fixed Issues and Known Issues

3.1 Fixed Issues in Aras Innovator 23

3.1.1 Platform

| Issue # | Fixed Description |
|---------------------|--|
| F-005646 | Added a new "Report" widget type which enables users to display any existing Report item in dashboards. |
| F-005730 | Fixed several similar bugs that were related to changing an item's lock status with an old generation open. |
| F-006591 | A comprehensive Application Programming Interface (API) that provides functions to customize the Technical Document Editor using the Configurable User Interface (CUI) is now available. |
| I-048269 | Fixed an issue in which a Workflow Map, when saved with the default name, was incorrectly set as claimed after saving. |
| 092192, I-040503 | Aras has improved the handling of password encryption at rest to include the use of standard Microsoft options for conversion users. |

3.2 Known Issues in Aras Innovator 23

3.2.1 Platform

| Issue # | Description | Workaround |
|---------|--|---|
| 006830 | Cannot change a text property from “not required” to “required.” | A workaround has been provided in the Aras Innovator on-line help. |
| 007281 | Vault server cannot resolve host name. | The vault URL computed by Aras Innovator can fail to calculate when based on DNS settings. If you encounter a problem, please contact Aras support. |
| 011985 | On-line help is incomplete. | Not all new features in Aras Innovator have been documented in the on-line help section of Aras Innovator. Please contact Aras support if you are having difficulty with a new feature. |
| 023511 | The OnBlur and OnFocus events are not fired for properties of type Boolean when using Firefox on the client. This applies to all radio boxes and checkboxes. | |
| 023879 | The functionality outlined in the Aras Innovator – Login Security document is not certified for use with Aras Innovator. | |
| 024442 | Integrated Web Services are not certified for use with Aras Innovator. Aras Innovator is still compatible with Web Services. Only the integrated UI for creating and managing web services is not certified. | |
| 033559 | The standard integration with Microsoft SharePoint is not certified for use with Aras Innovator. | |
| 046252 | An error that occurs when loading a Reporting Services report in Tabs viewing mode could load error text over the main toolbar. | Close the report and reload the main grid. |
| 048590 | Tree Grid View does not support the display of all Property Item data types. | The issue relates to the display of Float Cell View Types. Changing the Cell View Type to Decimal addresses the issue. |
| 052666 | Users must type a space character after any @mention reference in collaboration messages or else further @mention references in the same message may be ignored. | |
| 052753 | Color List properties can fail to display color on client machines running the MAC OS and using the Chrome browser. | Use Firefox browser. |

| Issue # | Description | Workaround |
|---------|---|--|
| 052912 | When a File has several File Representations available only the first representation file returned is available to the user in Viewer. | |
| 052958 | Icons in the table of contents can fail to display. The root cause is the use of an SVG file in the ItemType definition that is not compatible with the size constraints of the TOC images. | The SVG file must be identified and altered to be compatible for rendering. |
| 053864 | Unexpected search results can occur if Boolean or Color data types are used with invalid conditions in the Query Builder. | Use correct static values for Boolean and Color values. |
| 054514 | Action can_execute is not called on UpdateTearOff State. | |
| 054883 | Session Timeout while in the relationship grid may cause errors and require a new login. | Close the browser window and login again. |
| 055070 | ItemTypes that have more than 23 characters cannot be added to an xClassification tree. | Use a name that is less than 23 characters. |
| 055587 | Freeze pane does not fully work in RTL languages. Grid layout can become corrupt when using the freeze pane feature. | |
| 056154 | The Get Value Method currently cannot return a Null value. An incorrect data type error appears. | |
| 056310 | Users can lose information if they change the "Dynamic Content" Setting in the ItemInfo element of Technical Documents. | This is expected functionality associated with 'dynamic content'. Technical Document Administrators should take care when reconfiguring a Document Type when existing content may have been created. |
| 056836 | CSS is not applied to Item properties in the main grid. | |
| 057701 | Cannot create an xProperty for Type item with a datasource file. | |
| 059094 | Using the same xProperties in different xClasses within an xClassification tree results in an error message. The Item associated with xClassification tree cannot be saved. | |
| 059181 | A new Tree Grid View Definition (TGVD) containing a mapped element cannot be copied using the 'Save-As' Function. | |

| Issue # | Description | Workaround |
|---------|--|---|
| 059692 | xClassification Trees cannot be updated after renaming the polysource ItemType associated with the xClassification tree. This problem can be related to other implicit polysource ItemTypes in Aras Innovator. The user sees the standard error message, but because the error occurs in the database layer due to inconsistencies in the data, it contains low level information about the SQL exception. At the same time, the secured function is too large to fit into the error dialog box. | Trigger the update of the xPropertyContainerItems ItemType by locking it and then clicking Save, Unlock, and Close. The server rebuilds the SQL view, considering the new polysource names. |
| 060246 | Focus is lost from the Reply button if the cursor is moved to the middle of the Reply button and the snapshot checkbox is selected. | |
| 060454 | If the WebDAVModule is installed on the server, it throws a 405 error when running a DELETE action on an item. | |
| 060477 | Extended Classification functionality is broken after importing auto-generated relationships using the Import tool. | Export the created package definition: <ol style="list-style-type: none"> 1. Select the desired package. 2. Select the Don't Remove checkbox for references to Unknown Packages. 3. Export selected Import package definition that was exported. 4. Select the exported package, 5. Import the selected package (if DB is clear, use the Import tool default settings). |
| 061681 | Editing comments is only supported in the default SecureMessageViewTemplate. If this template is modified, editing comments results in an error message. | Use the default SecureMessageViewTemplate for editing comments. |
| 062451 | In Chrome v67, the Tree View is not displayed in the Editor for a Quality Planning item or for any document created from a content type. | Use an alternate browser or contact Aras Support (support@aras.com) for hotfix availability. |
| 062877 | An error may occur if saving an item when many xProperties exist (e.g., 2300). | |
| 063022 | View_restriction_type list is not yet available in gn_GraphViewDefinition ItemType. | |
| 063702 | The Aras Innovator Server allows setting is_current=0 for non-versionable items through AML. | |
| 064108 | The order of requests with a ChangeSet in OData is significant. The service will process the requests within a ChangeSet in the order of the requests. | |

| Issue # | Description | Workaround |
|---|---|--|
| 064243 | Reference to an item is lost after applying @aras.action=purge in ChangeSet in OData. | |
| 065154 | Component onChange event is fired constantly (Chrome) and may hang the browser session. | Use a different browser. |
| 065445 | Passwords with non-Latin characters are not supported. | |
| 069664 | When updating a Graph Visualization and a single NVD is specified in a GVD, it is applied to all nodes instead of only the ones that are defined by the query item. | |
| 070139 | Newline characters are being added in the middle of text content that is cut and pasted from a Word document in the Technical Documentation Framework. | |
| 077386, 078373, 078628, 078630 | Form elements and fields may overlap each other in German or Japanese localization. | |
| 078110 | Potential memory issues with xProperties search returning more than 10,000 results per page. | |
| 078137 | Cannot create an item with 150 properties of type item. | |
| 078230 | The value of an xProperty is not displayed in the grid. | Click Refine Search and check "Select All" checkbox. (When all values are selected, all values are displayed correctly). |
| 078583 | Relationship does not work if exclusion is used. | |
| 078645 | OAuthServer/AuthenticateService and other OAuth related functions do not proxy SMSESSION cookies. | |
| 084173 | Status item icons are not rendered when exporting the grid to PDF. | |
| 084175 | Export to PDF displays Restricted items as blank instead of displaying "Restricted" text. | |
| 087994 | An error is displayed if the administrator views the History Container ItemType. | Close the error windows. The data is properly displayed. |
| 088147 | If an ItemType is set as RelationshipType and the RelationshipTypes Tab is open, ItemType fields other than Name and Singular Label in the form will be cleared after updating any field. | Save the ItemType. The fields will display the correct data after saving. |

| Issue # | Description | Workaround |
|------------------|--|--|
| 099349 | Class HttpClientNavigator which was introduced as a public API in Release 20 was removed from public access in Release 21 | Use specialized classes WindowsTokenProvider or CertificateTokenProvider instead |
| 093399 | Applications and IOM DLL authentication functionality built with versions prior to Aras Innovator Release 14 will not connect. | Update to Aras Innovator Release 14 or higher. |
| F-000574 | The command bars associated with Effectivity Expression ItemTypes do not use the default item command bar. The Effectivity ItemTypes are: - effs_scope - effs_expression | |
| F-000591 | The Relationship and Paging toolbars should be removed from the Query Definition parameters dialog box. The custom toolbar can either be retained as is or updated to the new UI. | |
| F-000592 | The Relationship and Paging toolbars should be removed from the Tree Grid View Map parameters dialog box. The checkmark and X buttons should be replaced with the standard UI OK and Cancel buttons. | |
| F-001881, 056625 | Exporting a Tree Grid View definition does not result in the export of custom CUI components that have been associated with the Tree Grid View definition (or relationships associated with it). | The CUI components will need to be exported separately. The user will need to export Command Bar Item, Command Bar section, Presentation Configuration and ItemPresentationConfiguration items associated with the custom CUI components that have been added. |
| I-001831, 072506 | When uninstalling Aras Innovator, the system can indicate that a file cannot be deleted because another program is still using it. | In IIS, cycle the OAuth App pool (stop the service and then restart it). Once this process is complete, the uninstall will finish successfully without any further error messages. |
| I-002519, 072008 | Windows authentication may display a "You are disconnected" error if the server MemoryCache removes HttpServerConnection from the cache. | |
| I-003734, 059772 | Multilanguage translations are missing from Effectivity Services. | |
| I-007920 | Query Definitions that include query items such as CAD[Exists(Native File)] in conjunction with a Dynamic 3D Viewer Query Definition result in slower processing times. | |

| Issue # | Description | Workaround |
|------------------|--|--|
| I-009836 | Checkboxes in the Extended Classification relationship grid are the wrong size. They should be 16x16. | |
| I-010552 | Using Chrome with the NonVisual Desktop Access application may cause the browser to close after the dialog window appears. | Update to the latest version of Chrome or do not use the NonVisual Desktop Access application in combination with the older version of Chrome. |
| I-010576 | Cells in some specialized relationship grids may not display correctly after zooming. | |
| I-010655 | Quickly clicking the "New Part" button on the relationship toolbar may result in the same sequence number being used for multiple rows in the list when using Edge. | Do not click too fast in Edge or use a different browser. |
| I-010951, 073231 | Workflow process may result in SQL Deadlocks, if <200 Workflow Related items and users trigger workflows in parallel. An OnAfterAddActivityAssignment server-side method executing GetItem/AddItem against "Activity Assignment", "Activity Variable", etc. ItemTypes can cause SQL Selects and Inserts in one transaction that may cause SQL Deadlocks. | |
| I-011102 | Type Ahead may fail for unsaved changes to Keyed Name in Item cell. | Item properties can be edited after the last save. |
| I-011278 | When using Export to Word/Excel, the background color in relationship properties cells is not exported along with the data. | |
| I-012619 | Including 0s in the decimal part of an Unsigned Big Integer number is not truncated after changing focus, which makes the value invalid. | |
| I-012655 | Using spaces in an Unsigned Big Integer cell property does not trigger an error message. | After focusing out all the spaces are truncated in Unsigned Big Integer property. |
| I-012681 | Subtitle of a Technical Document cannot be edited if selected directly in the Structure Tree. | Edit the Subtitle in the Editor instead of the Structure Tree. |
| I-012933 | The Relationship grid does not automatically scroll down to a new row after it has been added. | Scroll to the bottom of the grid if the newly added rows are not visible in the Relationship container. |
| I-013120 | When using Export to PDF from an item, radio buttons are not exported correctly in the document. | |
| I-013368 | Vote list dropdown contains no items in Activity Completion form, if Activity is opened using Ctrl+Enter shortcut. | If User opens this Activity by double-click or click on "Complete Task", the form is displayed correctly. |

| Issue # | Description | Workaround |
|------------------|---|--|
| I-013468 | Certain HTML report tabs (such as ItemType Definition Report) do not work with Tear Off Tab function. | |
| I-013576 | After adding items in a relationship tab of an item, when the user scrolls to the top items in the tab, the scrolling can freeze | Scroll to the top of the overall item view, which activates the relationship grid scrolling. |
| I-013898 | Properties that are disabled on a Form can be edited when mapped into a TDF document. | |
| I-013995 | Undo/Redo within the TDF editor does not work for content modified in Mapped Document Elements | Modified content must be changed back manually when edited in the Technical Document Editor. |
| I-014045 | If user loses access to an item they are editing when they do a save, the update cannot be saved and a "No items of type {itemtype} found" error is returned by the server. | No workaround. User must get access after a change if the change is to be saved. |
| I-014055 | Part save can fail with an "Exception in Goal Basis refresh" error if user does not have needed permissions | No workaround. If goals are not being used, the Part form may be modified to eliminate the Form Event calling the Show Goal Basis method. |
| I-015194 | If Append Results is enabled, there may be inconsistent behavior with paging commands. | |
| I-015585 | When the browser window zoom is set, for example to 90% (in zoom out direction) in Edge, the relationship grid cannot be scrolled up after scrolling all grid down. | Use a different browser, "zoom in" browser window to 100%, or locate the 1st row using the "Up Arrow" on your keyboard. |
| I-018002 | Query Builder Editor becomes unusable if a Query Item which is referenced by another Query Item using either a count, min, or max condition is removed, and the Query Definition is then saved. | Remove the references from any Query Item. Then the target Query Item can be removed, and the Query Definition saved. |
| I-019172 | If ItemType is set with Default Structure View = Tabs Min, items are opened with the second accordion section minimized, but then after opening it the accordion height is too small. | Reduce screen height, and the accordion height will be corrected. |
| I-019494, 057648 | Incorrect access controls based on Boolean properties/xProperties where value = NULL. NULL values are incorrectly treated as 0. | Do not use logic for NULL in the Boolean properties of access controls. Use a defined Boolean value or 1/0. The target value should have a default of 0. |
| I-019902 | If the method referenced by an Environment Attribute returns a different data type than the one originally called out, an error is returned on the save of the Environment Attribute and it cannot be used. | Log in as Administrator and delete the Environment Attribute. |

| Issue # | Description | Workaround |
|--------------------|--|--|
| I-020725, 064829 | User Login will succeed, but the user will be unable to perform any actions if a JavaScript method was assigned to a server event by mistake. | Disable the incorrectly assigned method directly in the database. |
| I-020825, 053303 | When a Query definition is configured to reuse a root Query Item in both a Parent and a Child Query Item, the result is endless recursion when executing the Query Action. | Do not include referenced and related ItemTypes in a Query Definition when the relationship between those ItemTypes is reused. |
| I-021333 | Incorrect structure is shown in "Where Used" when viewed as the superuser. | View the "Where Used" structure as a member of the administrator group. |
| I-021734, 084121 | In the Technical Document Editor, if the entire text of the Subtitle is selected and deleted, the text reappears after saving. | Place the cursor in the field and remove the text by backspacing or deleting the characters one at a time. |
| I-021884 | It is possible to add query parameters to an unclaimed Query Definition item which results in the 'Unsaved Changes' dialog appearing and an error being triggered if an attempt is made to Save. | |
| I-022388, 056158 | Creating a command bar section where the location is "TGV Toolbar" and the Classification=Method and Builder Method results in the method not executing and an error message being displayed. | |
| I-023064, 085092 | ItemType forms may display no fields when using Firefox in an https environment with the server and Client OS set to German. | Use a different browser, different language or non-https connections. |
| I-023336 | MAC Policy appears to be editable but remains in a read-only state if the 'New Version' action is used on a currently displayed read-only policy. | Close and reopen the MAC Policy Form. |
| I-024473 | Multi-select from search dialog using shift-click to select multiple items returns the selection in reverse order. | Select items using control key with click instead of shift-click. |
| I-024530 | After editing a related item in a relationship tab of a source item, and clicking "Done Editing", the source item is incorrectly removed from any main search grid where it appears. | |
| I-024701 | Context menu in Tree Grid View (with View, Grow, Trim, View Effectivity) is shown for 'Show More' line but an error is displayed if there is an attempt to use it. | |
| I-026236, I-026729 | Activating more than one MAC Policy using the same xClasses and xProperties fails with an "Error during generate secured functions." message when the second MAC policy is saved/activated. | Create only one MAC policy and combine conditions using the AND operand. |

| Issue # | Description | Workaround |
|----------|---|--|
| I-026681 | Activating a MAC policy with a Collection.Contains expression comparing to a constant fails with an error message - "Error during generate secured functions." e.g., condition= Collection.Contains(CurrentItem.[Derived attribute of List Data type], 'constant'). | Redefine MAC policy to compare with a property value, not a constant. |
| I-030661 | The text entries in the dropdown for the Claim column in search grids ("Claimed by me", etc.) are not localized. | |
| I-031486 | Search criteria are lost when switching from Simple to Advanced search mode if using numeric properties with wildcards. | |
| I-032724 | xProperties values are not shown in Search results when using a saved custom grid layout if the Default layout (as set in preferences) does not include these xProperties. | Add the desired xProperties to the Default Layout. |
| I-034296 | If an item form of a relationship item is opened from a relationship tab, it cannot be closed if pending changes exist in the relationship tab. | Exit and re-start Aras Innovator. |
| I-036082 | User preferences, such as grid column width, are not saved if they were made for an item in edit mode, then the item is not saved, and after that the browser window is closed. | |
| I-038294 | On a slow connection, if the focus is set at the Language field in the TOC Editor, the Language search grid is not loaded by clicking the button. | Re-open Language search grid one more time. |
| I-043661 | Refresh button on the Widget doesn't update data for dynamic properties for User in another session. | If User re-opens Dashboard tab in their session, the data will be updated. |
| I-044991 | If the admin user does not have "update" permissions for an ItemType, they cannot add that ItemType to the TOC using the TOC Editor | Give the admin user "update" permissions for the ItemType, or login as root user to make the change. |
| I-045503 | Sort Across Pages does not work in Grid widgets. | |
| I-047530 | Customers who created Widget Template Items in Aras Innovator Release 20 may encounter a permission error when performing a self-service upgrade to Release 21 or later. | Please contact Aras Support if you encounter this issue. |
| I-047972 | Edit button is disabled on an item's toolbar after "Create new revision" is executed from a search grid, and the item is opened. | Click Refresh button. |

| Issue # | Description | Workaround |
|----------|---|--|
| I-048091 | Simple search criteria containing the range operator '...' are not properly converted to Advanced search criteria when switching modes. | |
| I-048094 | Simple search criteria containing the pipe operator ' ', when used with numeric and date values, are not properly converted to Advanced search criteria when switching modes. | |
| I-048682 | When processing a large volume of data using the Configurator Services API, users may encounter a low memory error from the server. | Increase available physical (RAM) or virtual (paging file) memory. |
| I-050429 | Edits made to a child Part item while the parent Part item is in edit mode will be lost when the parent Part item is saved. | |
