

Aras Innovator Configuring Solutions

Training Course Description

Course

Aras Innovator Configuring Solutions

Duration and class size

5 days; 20 participants

Format

This course is delivered remotely online, includes instructor-led demonstrations, and incorporates practical exercises for participants to gain practical learning experiences.

Target audience

System Administrators, Power Users, DevOps Engineers, and Developers who maintain, build, modify, and deploy Aras Innovator solution applications.

Description

This 5-day hands-on training course combines lectures, demonstrations, and exercises to introduce participants to the low-code modeling capabilities of the Aras Innovator enterprise application framework. They learn to build custom items to create a robust solution. Participants also learn to make changes to some of the items that they became familiar with as part of the PLM Essentials class. They can edit existing item definitions and adjust to meet their business processes and rules. As an example, add more properties to existing parts or documents, modify the pre-created workflows or lifecycle maps, modify permission sets, etc. This class is intended for all users who need to understand the modeling capabilities of Innovator to make better decisions about implementation.

Prerequisites

- Completion of the Aras Innovator PLM Essentials course
- Ability to navigate, search and find items, and create new items in Aras Innovator
- Basic familiarity with computer systems and enterprise applications

Learning Objectives

On completion of this course participants will be able to:

- Navigate in Aras Innovator system and perform business item queries
- Set up User accounts and group identities with security Permissions
- Create new business ItemTypes and Properties
- Use extended Classification with extended Properties
- Define a user interface with interactive, responsive Forms
- Establish Versioning, Relationships and Lifecycle states for business Items
- Create a Workflow Process that includes E-mail Notifications
- Work with Files and Vault Replication
- Make changes to the Configurable User Interface by adding buttons, menus, shortcuts, etc.
- Package solution work items and export into AML
